- **Multiplexed Inputs/Outputs Provide Improved Bit Density**
- **3-State Outputs Drive Bus Lines Directly**
- **Sign Extend Function**
- **Direct Overriding Clear**

description

These low-power Schottky eight-bit shift registers feature multiplexed input/output data ports to achieve full eight-bit data handling in a single 20-pin package. Serial data may be entered into the shift-right register through either the D0 or the D1 input as selected by the data select input. A serial output ($Q_{H'}$) is also provided to facilitate expansion. Synchronous parallel loading is accomplished by taking both the register enable and the $S/\overline{P}$ inputs low. This places the three-state input/output ports in the data input mode. Data are entered on the low-to-high transition of the clock. The data extend function repeats the sign in the Q_A flip-flop during shifting. A direct overriding clear input clears the internal registers when taken low whether the outputs are enabled or off. The output enable does not interfere with synchronous operation of the register.

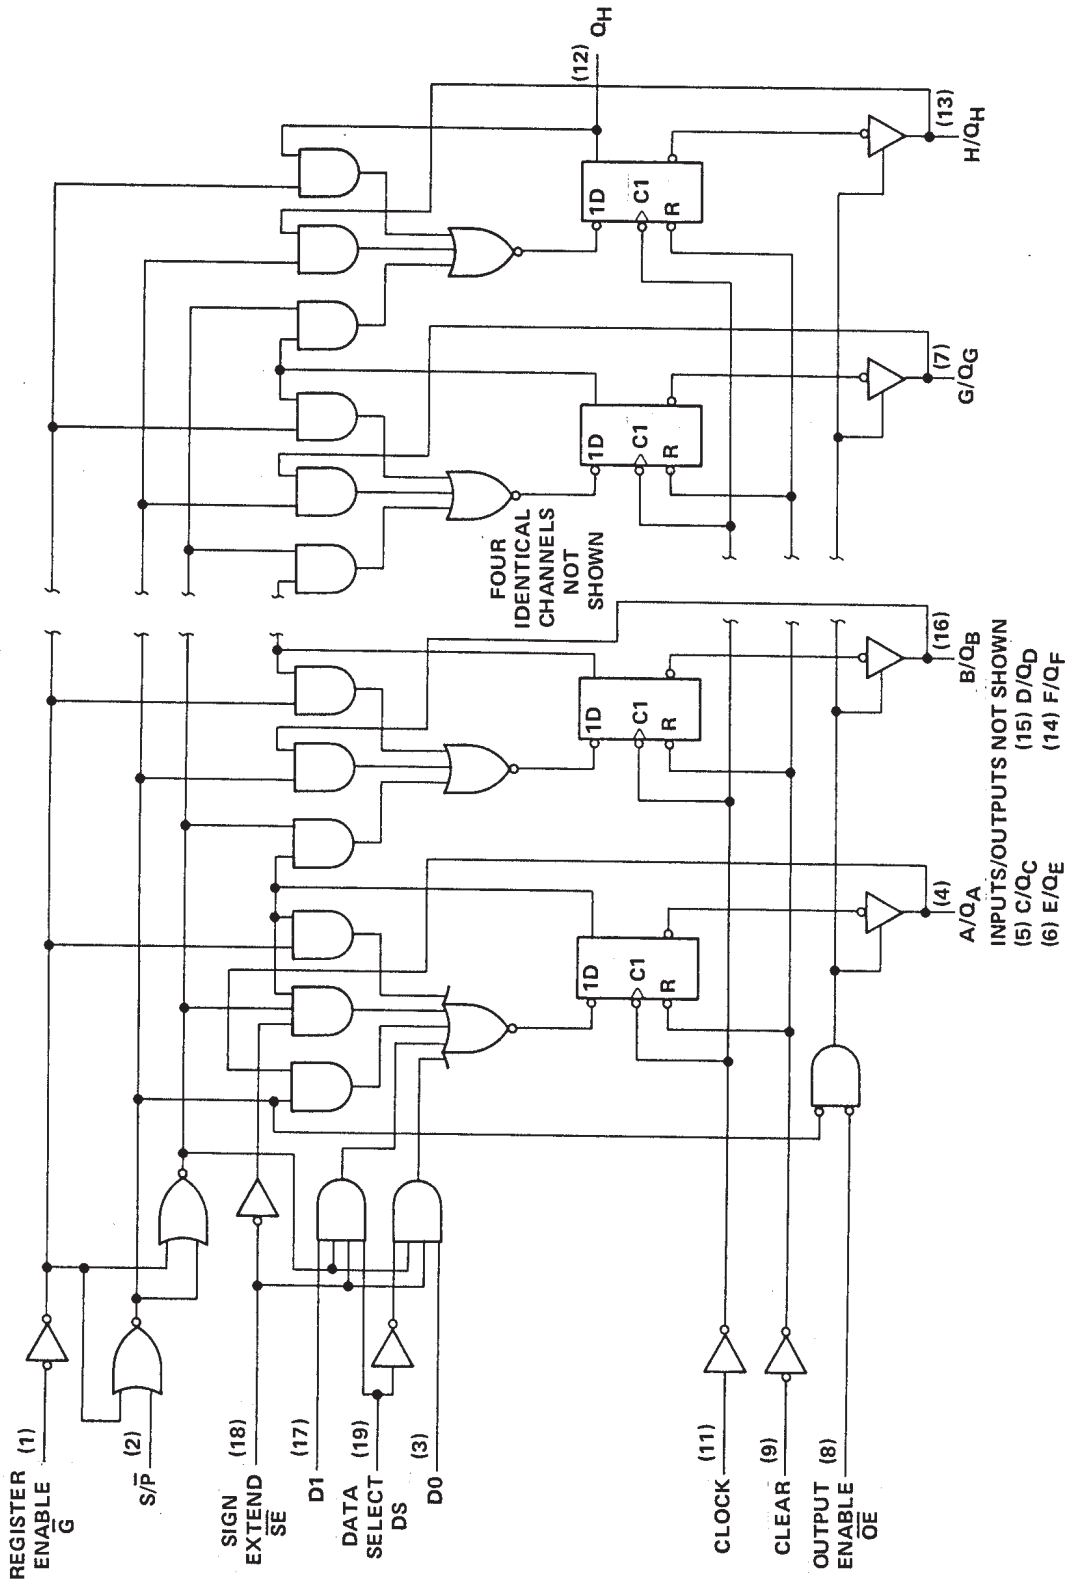
FUNCTION TABLE

OPERATION	INPUTS							INPUTS/OUTPUTS				OUTPUT
	$\overline{CLR}$	REGISTER ENABLE $\overline{G}$	$S/\overline{P}$	SIGN EXTEND $\overline{SE}$	DATA SELECT DS	OUTPUT ENABLE $\overline{OE}$	CLK	A/Q_A	B/Q_B	C/Q_C . . . H/Q_H		Q_H
Clear	L	H	X	X	X	L	X	L	L	L	L	L
	L	X	H	X	X	L	X	L	L	L	L	L
Hold	H	H	X	X	X	L	X	Q_{A0}	Q_{B0}	Q_{C0}	Q_{H0}	Q_{H0}
Shift Right	H	L	H	H	L	L	↑	D0	Q_{An}	Q_{Bn}	Q_{Gn}	Q_{Gn}
	H	L	H	H	H	L	↑	D1	Q_{An}	Q_{Bn}	Q_{Gn}	Q_{Gn}
Sign Extend	H	L	H	L	X	L	↑	Q_{An}	Q_{An}	Q_{Bn}	Q_{Gn}	Q_{Gn}
Load	H	L	L	X	X	X	↑	a	b	c	h	h

When the output enable is high, the eight input/output terminals are disabled to the high-impedance state; however, sequential operation or clearing of the register is not affected. If both the register enable input and the $S/\overline{P}$ input are low while the clear input is low, the register is cleared while the eight input/output terminals are disabled to the high-impedance state.

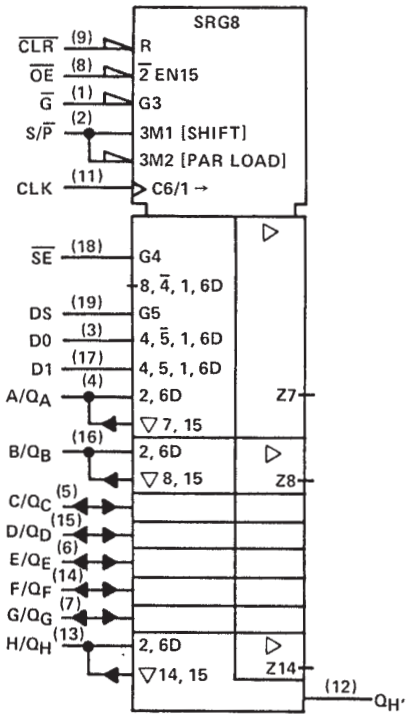
H = high level (steady state)
L = low level (steady state)
X = irrelevant (any input, including transitions)
↑ = transition from low to high level
Q_{A0} . . . Q_{H0} = the level of Q_A through Q_H, respectively, before the indicated steady-state conditions were established
Q_{An} . . . Q_{Hn} = the level of Q_A through Q_H, respectively, before the most recent ↑ transition of the clock
D0, D1 = the level of steady-state inputs at inputs D0 and D1 respectively
a . . . h = the level of steady-state inputs at inputs A through H respectively

logic diagram (positive logic)



Pin numbers shown are for DW, J, N, and W packages.

logic symbol†



†This symbol is in accordance with ANSI/IEEE Std. 91-1984 and IEC Publication 617-12.
Pin numbers shown are for DW, J, N, and W packages.

t_{PLZ}						15	25	

¶ f_{max} ≡ maximum clock frequency
t_{PLH} ≡ propagation delay time, low-to-high-level output
t_{PHL} ≡ propagation delay time, high-to-low-level output
t_{PZH} ≡ output enable time to high level
t_{PZL} ≡ output enable time to low level
t_{PHZ} ≡ output disable time from high level
t_{PLZ} ≡ output disable time from low level

NOTE 2: For testing f_{max}, all outputs are loaded simultaneously, each with C_L and R_L as specified for the propagation times. Load circuits and voltage waveforms are shown in Section 1.

IMPORTANT NOTICE

Texas Instruments and its subsidiaries (TI) reserve the right to make changes to their products or to discontinue any product or service without notice, and advise customers to obtain the latest version of relevant information to verify, before placing orders, that information being relied on is current and complete. All products are sold subject to the terms and conditions of sale supplied at the time of order acknowledgement, including those pertaining to warranty, patent infringement, and limitation of liability.

TI warrants performance of its semiconductor products to the specifications applicable at the time of sale in accordance with TI's standard warranty. Testing and other quality control techniques are utilized to the extent TI deems necessary to support this warranty. Specific testing of all parameters of each device is not necessarily performed, except those mandated by government requirements.

CERTAIN APPLICATIONS USING SEMICONDUCTOR PRODUCTS MAY INVOLVE POTENTIAL RISKS OF DEATH, PERSONAL INJURY, OR SEVERE PROPERTY OR ENVIRONMENTAL DAMAGE ("CRITICAL APPLICATIONS"). TI SEMICONDUCTOR PRODUCTS ARE NOT DESIGNED, AUTHORIZED, OR WARRANTED TO BE SUITABLE FOR USE IN LIFE-SUPPORT DEVICES OR SYSTEMS OR OTHER CRITICAL APPLICATIONS. INCLUSION OF TI PRODUCTS IN SUCH APPLICATIONS IS UNDERSTOOD TO BE FULLY AT THE CUSTOMER'S RISK.

In order to minimize risks associated with the customer's applications, adequate design and operating safeguards must be provided by the customer to minimize inherent or procedural hazards.

TI assumes no liability for applications assistance or customer product design. TI does not warrant or represent that any license, either express or implied, is granted under any patent right, copyright, mask work right, or other intellectual property right of TI covering or relating to any combination, machine, or process in which such semiconductor products or services might be or are used.
