

UM1974 User manual

STM32 Nucleo-144 boards (MB1137)

Introduction

The STM32 Nucleo-144 boards based on the MB1137 reference board (NUCLEO-F207ZG, NUCLEO-F303ZE, NUCLEO-F412ZG, NUCLEO-F413ZH, NUCLEO-F429ZI, NUCLEO-F439ZI, NUCLEO-F446ZE, NUCLEO-F722ZE, NUCLEO-F746ZG, NUCLEO-F756ZG, NUCLEO-F767ZI, and NUCLEO-H743ZI) provide an affordable and flexible way for users to try out new concepts and build prototypes with STM32 microcontrollers, choosing from the various combinations of performance, power consumption and features. The ST Zio connector, which extends the ARDUINO® Uno V3 connectivity, and the ST morpho headers make it easy to expand the functionality of the Nucleo open development platform with a wide choice of specialized shields. The STM32 Nucleo-144 boards do not require any separate probe as they integrate the ST-LINK/V2-1 debugger/programmer. The STM32 Nucleo-144 boards come with the comprehensive free software libraries and examples available with the STM32Cube MCU Package.

Features UM1974

1 Features

The STM32 Nucleo-144 boards offer the following features:

- Common features
 - STM32 Arm^{®(a)} Cortex[®] core-based microcontroller in an LQFP144 package
 - 3 user LEDs
 - 2 user and reset push-buttons
 - 32.768 kHz crystal oscillator
 - Board connectors:
 - USB with Micro-AB
 - SWD
 - ST Zio expansion connector including ARDUINO® Uno V3
 - ST morpho expansion connector
 - Flexible power-supply options: ST-LINK USB V_{BUS} or external sources
 - On-board ST-LINK/V2-1 debugger/programmer with USB re-enumeration capability: mass storage, Virtual COM port and debug port
 - Comprehensive free software libraries and examples available with the STM32Cube MCU Package
 - Supported by a wide choice of Integrated Development Environments (IDEs) including IAR Embedded Workbench[®], MDK-ARM, STM32CubeIDE
- Board-specific features
 - Ethernet compliant with IEEE-802.3-2002
 - USB OTG or full-speed device
 - Board connectors:
 - Ethernet RJ45

arm

a. Arm is a registered trademark of Arm Limited (or its subsidiaries) in the US and/or elsewhere.

2 Ordering information

To order the STM32 Nucleo-144 board, refer to *Table 1*. Additional information is available from the datasheet and reference manual of the target microcontroller.

Table 1. Ordering information

Order code	Board reference	Target STM32	Differentiating features
NUCLEO-F207ZG		STM32F207ZGT6	EthernetUSB OTG FS on Micro-AB connector
NUCLEO-F303ZE		STM32F303ZET6	EthernetDevice-only USB on Micro-AB connector
NUCLEO-F412ZG		STM32F412ZGT6	- USB OTG FS on Micro-AB connector

Ordering information UM1974

2.1 Codification

The meaning of the codification is explained in *Table 2*.

Table 2. Codification explanation

NUCLEO-TXXXZY	Description	Example: NUCLEO-F446ZE
TXXX	MCU product line in STM32 32-bit Arm Cortex MCUs	STM32F446
Z	STM32 package pin count – Z for 144 pins	144 pins
Υ	STM32 flash memory size – E for 512 Kbytes – G for 1 Mbyte – H for 1.5 Mbytes – I for 2 Mbytes	512 Kbytes

3 Development environment

3.1 System requirements

- Multi-OS support: Windows^{®(a)} 10, Linux^{®(b)} 64-bit, or macOS^{® (c)}
- USB Type-A or USB Type-C® to Micro-B cable

3.2 Development toolchains

- IAR Systems[®] IAR Embedded Workbench^{®(d)}
- Keil[®] MDK-ARM^(d)
- STMicroelectronics STM32CubeIDE

3.3 Demonstration software

The demonstration software, included in the STM32Cube MCU Package corresponding to the on-board microcontroller, is preloaded in the STM32 flash memory for easy demonstration of the device peripherals in standalone mode. The latest versions of the demonstration source code and associated documentation can be downloaded from www.st.com.

4 Conventions

Table 3 provides the conventions used for the ON and OFF settings in the present document.

Table 3. ON/OFF conventions

Convention	Definition		
Jumper JPx ON	Jumper fitted		
Jumper JPx OFF	Jumper not fitted		
Solder bridge SBx ON	SBx connections closed by solder or 0 ohm resistor		
Solder bridge SBx OFF	SBx connections left open		

In this document the references for all information that is common to all sale types, are "STM32 Nucleo-144 board" and "STM32 Nucleo-144 boards".

Quick start UM1974

5 Quick start

The STM32 Nucleo-144 board is a low-cost and easy-to-use development kit, used to evaluate and start a development quickly with an STM32 microcontroller in LQFP144 package.

Before installing and using the product, accept the Evaluation Product License Agreement from the www.st.com/epla webpage. For more information on the STM32 Nucleo-144 and for demonstration software, visit the www.st.com/stm32nucleo webpage.

5.1 Getting started

Follow the sequence below to configure the Nucleo-144 board and launch the demonstration application (for components location refer to *Figure 4: Top layout*):

- Check jumper position on the board:
 - JP1 OFF (PWR-EXT) selected (see Section 6.4.1: Power supply input from ST-LINK/V2-1 USB connector for more details)
 - JP3 on U5V (Power source) selected (for more details see *Table 7: External power sources*)
 - JP5 ON (IDD) selected (for more details see Section 6.7: JP5 (I_{DD}))
 CN4 ON selected (for more details see Table 4: CN4 states of the jumpers)
- For the correct identification of the device interfaces from the host PC and before connecting the board, install the Nucleo USB driver available on the www.st.com/stm32nucleo website.
- 3. To power the board connect the STM32 Nucleo-144 board to a PC with a USB cable 'Type-A to Micro-B' through the USB connector CN1 on the ST-LINK. As a result, the green LED LD6 (PWR) and LD4 (COM) light up and the red LED LD3 blinks.
- 4. Press button B1 (left button).
- 5. Observe the blinking frequency of the three LEDs LD1 to LD3 changes, by clicking on the button B1.
- 6. The software demonstration and the several software examples, that allow the user to use the Nucleo features, are available at the www.st.com/stm32nucleo webpage.
- 7. Develop an application, using the available examples.

6 Hardware layout and configuration

The STM32 Nucleo-144 board is designed around the STM32 microcontrollers in a 144-pin LQFP package.

Figure 3 shows the connections between the STM32 and its peripherals (ST-LINK/V2-1, push-buttons, LEDs, USB, Ethernet, ST Zio connectors and ST morpho headers).

Figure 4 and Figure 5 show the location of these features on the STM32 Nucleo-144 board.

The mechanical dimensions of the board are shown in Figure 6 and Figure 7.

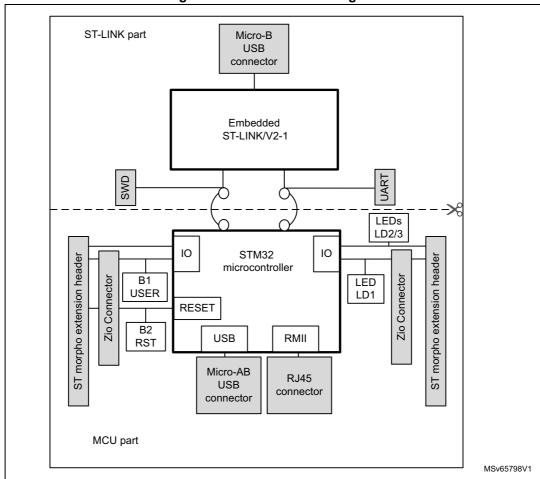

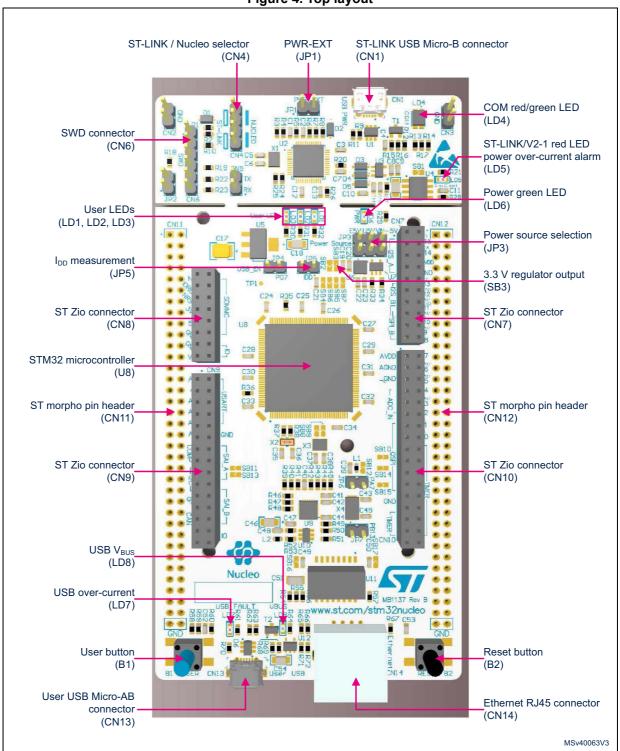

Figure 3. Hardware block diagram

6.2 Cuttable PCB

The STM32 Nucleo-144 board is divided into two parts: ST-LINK and target STM32. The ST-LINK part of the PCB can be cut out to reduce the board size. In this case the remaining target STM32 part can only be powered by V_{IN} , E5V and 3.3 V on ST morpho connector CN11, or V_{IN} and 3.3 V on ST Zio connector CN8. It is still possible to use the ST-LINK part to program the STM32, using wires between CN6 and SWD available signals on the ST morpho connector (SWCLK CN11 pin 15, SWDIO CN11 pin 13 and NRST CN11 pin 14).

47/

UM1974 Rev 10 15/84

6.3 Embedded ST-LINK/V2-1

The ST-LINK/V2-1 programming and debugging tool is integrated in the STM32 Nucleo-144 board.

The ST-LINK/V2-1 makes the STM32 Nucleo-144 board mbed enabled.

The embedded ST-LINK/V2-1 supports only SWD for STM32 devices. For information about debugging and programming features refer to the *ST-LINK/V2 in-circuit* debugger/programmer for STM8 and STM32 user manual (UM1075), which describes in details all the ST-LINK/V2 features, and to the *Overview of ST-LINK derivatives* technical note (TN1235).

The changes versus ST-LINK/V2 version are listed below.

Additional features supported on ST-LINK/V2-1:

- USB software re-enumeration
- Virtual com port interface on USB
- Mass storage interface on USB
- USB power management request for more than 100mA power on USB

Features not supported on ST-LINK/V2-1:

- SWIM interface
- Minimum supported application voltage limited to 3 V

There are two different ways to use the embedded ST-LINK/V2-1, depending on the jumper state (see *Table 4*):

- Program/debug the STM32 on board
- Program/debug the STM32 in an external application board, using a cable connected to SWD connector CN6

Table 4. CN4 states of the jumpers

6.3.1 Drivers

Before connecting the Nucleo-144 board to a Windows[®] 7, Windows[®] 8 or Windows[®] 10 PC via USB, a driver for ST-LINK/V2-1 must be installed. It can be downloaded from the *www.st.com* website.

In case the STM32 Nucleo-144 board is connected to the PC before installing the driver, the PC device manager may report some Nucleo interfaces as "Unknown".

To recover from this situation, after installing the dedicated driver, the association of "Unknown" USB devices found on the STM32 Nucleo-144 board to this dedicated driver, must be updated in the device manager manually.

Note: It is recommended to proceed using USB Composite Device, as shown in Figure 8.

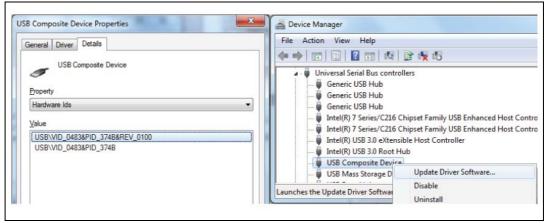

Figure 8. USB composite device

6.3.2 ST-LINK/V2-1 firmware upgrade

The ST-LINK/V2-1 embeds a firmware upgrade mechanism for in-situ upgrade through the USB port. As the firmware may evolve during the lifetime of the ST-LINK/V2-1 product (for example new functionalities, bug fixes, support for new microcontroller families), it is recommended to keep the ST-LINK/V2-1 firmware up to date before starting to use the STM32 Nucleo-144 board. The latest version of this firmware is available from the www.st.com website.

UM1974 Rev 10 17/84

MSv40065V3

6.3.3 Using the ST-LINK/V2-1 to program and debug the on-board STM32

To program the on-board STM32, place the two jumpers marked in red on the connector CN4, as shown in *Figure 9*. The CN6 connector must not be used, since it might disturb the communication with the STM32 microcontroller of the Nucleo-144 board.

CN4 jumpers ON SWD connector (CN6)

Figure 9. Connecting the STM32 Nucleo-144 board to program the on-board STM32

6.3.4 Using ST-LINK/V2-1 to program and debug an external STM32 application

It is very easy to use the ST-LINK/V2-1 to program the STM32 on an external application.

Simply remove the two jumpers from CN4, as shown in *Figure 10* and connect the application to the CN6 debug connector according to *Table 5*.

Note:

SB111 NRST (target STM32 RESET) must be OFF when CN6 pin 5 is used in an external application.

Table 5. Debug connector CN6 (SWD)

	· · · · · · · · · · · · · · · · · · ·	
Pin	CN6	Designation
1	VDD_TARGET	VDD from application
2	SWCLK	SWD clock
3	GND	Ground
4	SWDIO	SWD data input/output
5	NRST	RESET of target STM32
6	SWO	Reserved

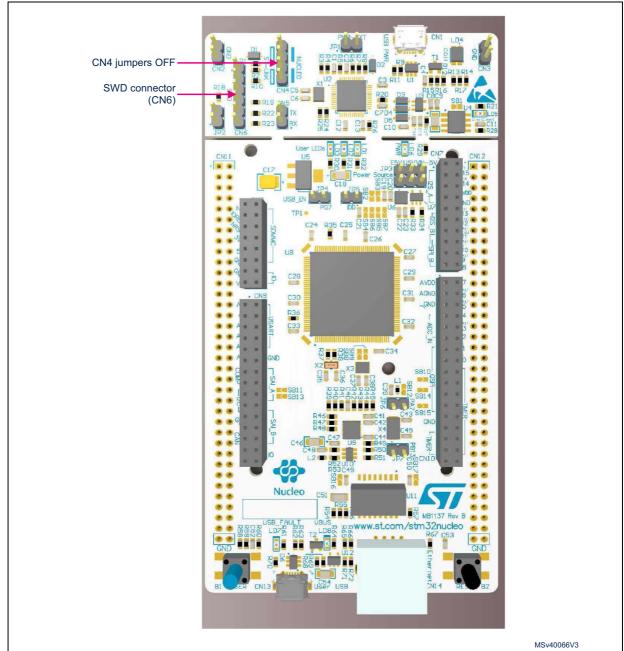

Figure 10. Using ST-LINK/V2-1 to program the STM32 on an external application

6.4 Power supply and power selection

The power supply is provided either by the host PC through the USB cable or by an external source: V_{IN} (7 V-12 V), E5V (5 V) or +3.3 V power supply pins on CN8 or CN11. In case V_{IN} , E5V or +3.3 V is used to power the Nucleo-144 board, this power source must comply with the standard EN-60950-1: 2006+A11/2009 and must be Safety Extra Low Voltage (SELV) with limited power capability.

In case the power supply is +3.3 V, the ST-LINK is not powered and cannot be used.

6.4.1 Power supply input from ST-LINK/V2-1 USB connector

The STM32 Nucleo-144 board and shield can be powered from the ST-LINK USB connector CN1 (U5V), by placing a jumper between the pins 3 and 4 of JP3, as shown in *Table 8: Power related jumper.* Note that only the ST-LINK part is power supplied before the USB enumeration, as the host PC only provides 100 mA to the board at that time. During the USB enumeration, the STM32 Nucleo-144 board requires 300mA of current to the host PC. If the host is able to provide the required power, the targeted STM32 microcontroller is powered and the green LED LD6 is turned ON, thus the STM32 Nucleo-144 board and its shield consume a maximum of 300 mA current, not more. If the host is not able to provide the required current, the targeted STM32 microcontroller and the extension boards are not power supplied. As a consequence the green LED LD6 stays turned OFF. In such case it is mandatory to use an external power supply as explained in the next section.

After the USB enumeration succeeds, the ST-LINK U5V power is enabled, by asserting the PWR_EN pin. This pin is connected to a power switch (ST890), which powers the board. This power switch features also a current limitation to protect the PC in case of short-circuit on board. If an overcurrent (more than 500 mA) happens on board, the red LED LD5 is lit.

JP1 is configured according to the maximum current consumption of the board when powered by USB (U5V). JP1 jumper can be set to ON to inform the host PC that the maximum current consumption does not exceed 100 mA (including potential extension board or ST Zio shield). In such condition USB enumeration will always succeed, since no more than 100 mA is requested to the PC. Possible configurations of JP1 are summarized in *Table 6*.

<u> </u>				
Jumper state	Power supply	Allowed current		
JP1 jumper OFF	USB power through CN1	300 mA max		
JP1 jumper ON	OSB power tillough Civi	100 mA max		
JP1 jumper (do not care)	V _{IN} , +3.3 V, +5 V power	For current limitation refer to Table 8		

Table 6. JP1 configuration table

Caution:

In case the maximum current consumption of the STM32 Nucleo-144 board and its shield boards exceeds 300 mA, it is mandatory to power the STM32 Nucleo-144 board with an external power supply connected to E5V, V_{IN} or +3.3 V.

Note:

In case the board is powered by a USB charger, there is no USB enumeration, so the green LED LD6 stays in OFF state permanently and the target STM32 is not powered. In this specific case the jumper JP1 must be set to ON, to allow the board to be powered anyway. But in any case the current is limited to 500 mA by U4 (ST890).

6.4.2 External power supply inputs

The Nucleo-144 board and its shield boards can be powered in three different ways from an external power supply, depending on the voltage used. The three power sources are summarized in the *Table 7*.

When STM32 Nucleo-144 board is power supplied by V_{IN} or E5V, the jumper configuration must be the following:

- Jumper JP3 on pin 1 and pin 2 for E5V or jumper JP3 on pin 5 and pin 6 for V_{IN}
- Jumper JP1 OFF

UM1974 Rev 10 21/84

Table 7. External power sources

p				
Input power name	Connector pins	Voltage range	Max current	Limitation
V _{IN}	CN8 pin 15 CN11 pin 24	7 V to 12 V	800 mA	From 7 V to 12 V only and input current capability is linked to input voltage: 800 mA input current when V _{IN} =7 V 450 mA input current when 7 V <v<sub>IN<9 V 250 mA input current when 9 V<v<sub>IN<12 V</v<sub></v<sub>
E5V	CN11 pin 6	4.75 V to 5.25 V	500 mA	-
+3.3 V	CN8 pin 7 CN11 pin 16	3 V to 3.6 V	-	Two possibilities: ST-LINK PCB is cut SB3 and SB111 OFF (ST-LINK not powered)

The 5 V power source is selected by the jumper JP3 as shown in *Table 8*.

Table 8. Power related jumper

Jumper	Description		
	U5V (ST-LINK V _{BUS}) is used as power source when JP3 is set as shown to the right (Default setting)		
	E5V U5V VIN-5V 2 ●		
	E5V is used as power source when JP3 is set as shown to the right:		
JP3	E5V U5V VIN-5V 2 1 0 0 5		
	V _{IN} is used as power source when JP3 is set as shown to the right:		
	$ \begin{array}{cccccccccccccccccccccccccccccccccccc$		

Using V_{IN} or E5V as an external power supply

When powered by V_{IN} or E5V, it is still possible to use the ST-LINK for programming or debugging only, but it is mandatory to power the board first using V_{IN} or E5V, then to connect the USB cable to the PC. In this way the enumeration succeeds, thanks to the external power source.

The following power-sequence procedure must be respected:

- 1. Connect jumper JP3 between pin 1 and pin 2 for E5V or between pin 5 and pin 6 for V_{IN}
- 2. Check that JP1 is removed
- 3. Connect the external power source to V_{IN} or E5V
- 4. Power on the external power supply 7 V< V_{IN} < 12 V to V_{IN} , or 5 V for E5V
- 5. Check that the green LED LD6 is turned ON
- 6. Connect the PC to the USB connector CN1

If this order is not respected, the board may be powered by USB (U5V) first, then by V_{IN} or E5V as the following risks may be encountered:

- 1. If more than 300 mA current is needed by the board, the PC may be damaged or the current supplied can be limited by the PC. As a consequence the board is not powered correctly.
- 2. 300 mA is requested at enumeration (since JP1 must be OFF) so there is risk that the request is rejected and the enumeration does not succeed if the PC cannot provide such current. Consequently the board is not power supplied (LED LD6 remains OFF).

External power supply input: + 3.3 V

When the 3.3 V is provided by a shield board, it is interesting to use the +3.3 V (CN8 pin 7 or CN11 pin 16) directly as power input. In this case the programming and debugging features are not available, since the ST-LINK is not powered.

When the board is powered with +3.3 V, two different configurations are possible:

- ST-LINK is removed (PCB cut)
- SB3 (3.3 V regulator) and SB111 (NRST) are OFF.

6.4.3 External power supply output

When powered by USB, V_{IN} or E5V, the +5 V (CN8 pin 9 or CN11 pin 18) can be used as output power supply for an ST Zio shield or an extension board. In this case, the maximum current of the power source specified in *Table 7: External power sources* must be respected.

The +3.3 V (CN8 pin 7 or CN11 pin 16) can be used also as power supply output. The current is limited by the maximum current capability of the regulator U6 (500 mA max).

4

UM1974 Rev 10 23/84

6.5 LEDs

User LD1: a green user LED is connected to the STM32 I/O PB0 (SB120 ON and SB119 OFF) or PA5 (SB119 ON and SB120 OFF) corresponding to the ST Zio D13.

User LD2: a blue user LED is connected to PB7.

User LD3: a red user LED is connected to PB14.

These user LEDs are on when the I/O is HIGH value, and are off when the I/O is LOW.

LD4 COM: the tricolor LED LD4 (green, orange, red) provides information about ST-LINK communication status. LD4 default color is red. LD4 turns to green to indicate that communication is in progress between the PC and the ST-LINK/V2-1, with the following setup:

- Slow blinking red/off: at power-on before USB initialization
- Fast blinking red/off: after the first correct communication between PC and ST-LINK/V2-1 (enumeration)
- Red LED on: when the initialization between the PC and ST-LINK/V2-1 is complete
- Green LED on: after a successful target communication initialization
- Blinking red/green: during communication with target
- Green on: communication finished and successful
- Orange on: communication failure

LD5 USB power fault: LD5 indicates that the board power consumption on USB exceeds 500 mA, consequently the user must power the board using an external power supply.

LD6 PWR: the green LED indicates that the STM32 part is powered and +5 V power is available on CN8 pin 9 and CN11 pin 18.

LD7 and LD8 USB FS: refer to Section 6.10: USB OTG FS or device.

6.6 Push-buttons

B1 USER: the user button is connected to the I/O PC13 by default (Tamper support, SB173 ON and SB180 OFF) or PA0 (Wakeup support, SB180 ON and SB173 OFF) of the STM32 microcontroller.

B2 RESET: this push-button is connected to NRST and is used to RESET the STM32 microcontroller.

6.7 JP5 (I_{DD})

Jumper JP5, labeled IDD, is used to measure the STM32 microcontroller consumption by removing the jumper and by connecting an ammeter:

- JP5 ON: STM32 is powered (default)
- JP5 OFF: an ammeter must be connected to measure the STM32 current. If there is no ammeter, the STM32 is not powered

To get a correct current consumption, the Ethernet PHY must be set in power-down mode or SB13 must be removed. Refer to *Section 6.11: Ethernet* for details.

6.8 OSC clock

6.8.1 OSC clock supply

There are four ways to configure the pins corresponding to the external high-speed clock (HSE):

- MCO from ST-LINK (Default): MCO output of ST-LINK is used as input clock. This
 frequency cannot be changed, it is fixed at 8 MHz and connected to the
 PF0/PH0-OSC IN of STM32 microcontroller. The configuration must be:
 - SB148 OFF
 - SB112 and SB149 ON
 - SB8 and SB9 OFF
- HSE on-board oscillator from X3 crystal (not provided): for typical frequencies and its capacitors and resistors, refer to the STM32 microcontroller datasheet and to the Oscillator design guide for STM8S, STM8A and STM32 microcontrollers Application note (AN2867) for the oscillator design guide. The X3 crystal has the following characteristics: 8 MHz, 8 pF, 20 ppm. It is recommended to use NX3225GD-8.000M-EXS00A-CG04874 manufactured by NIHON DEMPA KOGYO CO., LTD. The configuration must be:
 - SB148 and SB163 OFF
 - SB8 and SB9 ON
 - C37 and C38 soldered with 4.3 pF capacitors
 - SB112 and SB149 OFF
- Oscillator from external PF0/PH0: from an external oscillator through the pin 29 of the CN11 connector. The configuration must be:
 - SB148 ON
 - SB112 and SB149 OFF
 - SB8 and SB9 removed
- HSE not used: PF0/PH1 and PF1/PH1 are used as GPIOs instead of as clock. The configuration must be:
 - SB148 and SB163 ON
 - SB112 and SB149 (MCO) OFF
 - SB8 and SB9 removed

47/

UM1974 Rev 10 25/84

6.8.2 OSC 32 KHz clock supply

There are three ways to configure the pins corresponding to low-speed clock (LSE):

On-board oscillator (Default): X2 crystal. Refer to the Oscillator design guide for STM8S, STM8A and STM32 microcontrollers Application note (AN2867) for oscillator design guide for STM32 microcontrollers. It is recommended to use NX3214SA-32.768KHZ-EXS00A-MU00525 (32.768 kHz, 6 pF load capacitance, 200 ppm) from Nihon Dempa Kogyo CO, LTD.

Note:

For STM32F0 and STM32F3 Series it is recommended to use the low-drive-mode configuration of the LSE (low-drive capability in LSEDRV register), due to the 6 pF load capacitance of the crystal on the board.

- Oscillator from external PC14: from external oscillator through the pin 25 of CN11 connector. The configuration must be:
 - SB144 and SB145 ON
 - R37 and R38 removed
- LSE not used: PC14 and PC15 are used as GPIOs instead of low-speed clock. The configuration must be:
 - SB144 and SB145 ON
 - R37 and R38 removed

6.9 USART communication

The USART3 interface available on PD8 and PD9 of the STM32 can be connected either to ST-LINK or to ST morpho connector. The choice is changed by setting the related solder bridges. By default the USART3 communication is enabled between the target STM32 and both the ST-LINK and the ST morpho connector.

Table 9. USART3 pins

Pin name	Function	Virtual COM port	ST morpho connection
PD8	USART3 TX	SB5 ON and SB7 OFF	SB5 OFF and SB7 ON
PD9	USART3 RX	SB6 ON and SB4 OFF	SB6 OFF and SB4 ON

6.10 USB OTG FS or device

The STM32 Nucleo-144 board supports USB OTG or device-full-speed communication via a USB Micro-AB connector (CN13) and USB power switch (U12) connected to $V_{\rm BUS}$.

Note:

The NUCLEO-F303ZE board supports the USB device FS only. All the other STM32 Nucleo-144 boards support the USB OTG.

Warning:

USB Micro-AB connector (CN13) cannot power the Nucleo-144 board. To avoid damaging the STM32, it is mandatory to power the Nucleo-144 before connecting a USB cable on CN13. Otherwise there is a risk of current injection on STM32 I/Os.

A green LED LD8 lights up in one of these cases:

- Power switch (U12) is ON and STM32 Nucleo-144 board works as a USB host
- V_{BUS} is powered by another USB host when the STM32 Nucleo-144 board works as a USB device.

The red LED LD7 lights up if over-current occurs when +5 V is enabled on V_{BUS} in USB host mode.

Note:

- 1. It is recommended to power Nucleo-144 board by an external power supply when using USB OTG or host function.
- 2. JP4 must be ON when using USB OTG FS.

The NUCLEO-F303ZE board does not support the OTG function but it supports USB 2.0 full-speed, device-mode communication via a USB Micro-AB connector (CN13). USB disconnection simulation is implemented by PG6, which controls 1.5 K pull-up resistor (R70) on USB D+ line. Detection of 5 V power on USB connector (CN13) is available on PG7 thanks to a bridge between R62 and R63 resistors.

Table 10. USB pins configuration

Pin name	Function	Function Configuration when using USB connector Configuration when connector		Remark
PA8	USB SOF	-	-	Test point TP1
PA9	USB V _{BUS}	SB127 ON	SB127 OFF	Not on NUCLEO-F303ZE
PA10	USB ID	SB125 ON	SB125 OFF	Not on NUCLEO-F303ZE
PA11	USB DM	SB133 ON	SB133 OFF	-
PA12	USB DP	SB132 ON	SB132 OFF	-
PG6	USB GPIO OUT	NUCLEO-F303ZE: SB186 ON, SB187 OFF	NUCLEO-F303ZE: SB186 OFF	NUCLEO-F303ZE: D+ pull up control
1 30	335 31 10 301	All other Nucleo boards: SB186 OFF, SB187 ON	All other Nucleo boards: SB187 OFF	All other Nucleo boards: USB power switch control

UM1974 Rev 10

Pin name	Function	Configuration when using USB connector	Configuration when using ST morpho connector	Remark
		NUCLEO-F303ZE: JP4 ON, SB184 ON, SB185 OFF		NUCLEO-F303ZE: V _{BUS} detection
PG7	USB GPIO IN	All other Nucleo boards: JP4 ON, SB184 OFF	JP4 OFF	All other Nucleo boards: USB overcurrent alarm

Table 10. USB pins configuration (continued)

ESD protection part ESDA6V1BC6 is implemented on USB port because all USB pins on STM32 can be used as V_{BUS} or GPIO on the STM32 Nucleo-144 board.

Note:

If these pins are dedicated to USB port only, the USBLC6-4SC6 protection part is more suitable to protect USB port. If USB pin ID is not used, USBLC6-2SC6 can be used.

6.11 Ethernet

The STM32 Nucleo-144 board supports 10M/100M Ethernet communication by a PHY (U9) and RJ45 connector (CN14). Ethernet PHY is connected to the STM32 microcontroller via the RMII interface. 50MHz clock for the STM32 microcontroller is generated by the PHY RMII_REF_CLK.

Note:

- 1. NUCLEO-F303ZE, NUCLEO-F412ZG, NUCLEO-F413ZH, NUCLEO-F446ZE, and NUCLEO-F722ZE do not support the Ethernet function.
- 2. JP6 and JP7 must be ON when using Ethernet.

SB185 ON

3. Ethernet PHY must be set in power-down mode (in this mode Ethernet PHY ref clock turns off) to achieve the expected low-power mode current. This is done by configuring Ethernet PHY Basic Control Register (at address 0x00) Bit 11 (Power Down) to '1'. SB13 can also be removed to get the same effect.

Table 11. Ethernet pins

Pin name	Function	Conflict with ST Zio connector signal	Configuration when using Ethernet	Configuration when using ST Zio or ST morpho connector
PA1	RMII Reference Clock	-	SB13 ON	SB13 OFF
PA2	RMII MDIO	-	SB160 ON	SB160 OFF
PC1	RMII MDC	-	SB164 ON	SB164 OFF

PB13	RMII TXD1	I2S_A_CK	JP7 ON	JP7 OFF

6.12 Solder bridges

SBxx can be found on top layer and SB1xx can be found on bottom layer of the Nucleo-144 board.

Table 12. Solder bridges

Bridge State ⁽¹⁾ Description		Description	
SB2 (+3.3 V_PER)	ON	Peripheral power +3.3V_PER is connected to +3.3 V.	
3B2 (+3.3 V_PER)	OFF	Peripheral power +3.3V_PER is not connected.	
SB3 (3.3 V)	ON	Output of voltage regulator LD39050PU33R is connected to 3.3 V.	
SB3 (3.3 V)	OFF	Output of voltage regulator LD39050PU33R is not connected.	
SB7, SB4 (GPIO)	ON	PD8 and PD9 on STM32 are connected to ST morpho connectors CN11 and CN12. If these pins are used on ST morpho connectors, SB5 and SB6 must be OFF.	
	OFF	PD8 and PD9 on STM32 are disconnected to ST morpho connectors CN11 and CN12.	
SB5, SB6 (ST-LINK-USART)	ON	PA2 and PA3 on ST-LINK STM32F103CBT6 are connected to PD8 and PD9 to enable virtual COM port for mbed support. Thus PD8 and PD9 on ST morpho connectors cannot be used.	
	OFF	PA2 and PA3 on ST-LINK STM32F103CBT6 are disconnected to PD8 and PD9 on STM32.	
	ON	V _{DDA} and V _{REF+} on STM32 is connected to V _{DD} .	
SB12 (V _{DDA})	OFF	V_{DDA} and V_{REF+} on STM32 is not connected to V_{DD} and can be provided from pin 6 of CN7 (Used for external V_{REF+} provided by ARDUINO $^{\! (\! R \!)}$ shield).	
SB101,103,105,108 (DEFAULT) ON		Reserved, do not modify.	
SB102,104,106,109 (RESERVED)	OFF	Reserved, do not modify.	
	OFF	No incidence on ST-LINK STM32F103CBT6 NRST signal.	
SB107 (STM_RST)	ON	ST-LINK STM32F103CBT6 NRST signal is connected to GND (ST-LINK reset to reduce power consumption).	
SB110 (SWO)	ON	SWO signal of the STM32 (PB3) is connected to ST-LINK SWO input.	
3D110 (3WO)	OFF	SWO signal of STM32 is not connected.	

47/

Table 12. Solder bridges (continued)

SB111 (NRST) ON Board RESET signal (NRST) is connected to ST-LINK reset control I/O (T_NRST).	Bridge	State ⁽¹⁾	Description

Table 12. Solder bridges (continued)

Bridge	State ⁽¹⁾	Description
OD450 ()/	ON	V_{BAT} pin of STM32 is connected to V_{DD} .
SB156 (V _{BAT})	OFF	V _{BAT} pin of STM32 is not connected to V _{DD} .
	ON, OFF	B1 push-button is connected to PC13.
SB173, SB180 (B1-USER)	OFF,ON	B1 push-button is connected to PA0 (Set SB179 OFF if ST Zio connector is used).
	OFF,OFF	B1 push-button is not connected.
CD470 (DA0)	ON	PA0 is connected to ST Zio connector (Pin 29 of CN10)
SB179 (PA0)	OFF	PA0 is not connected to ST Zio connector (Pin 29 of CN10)
	OFF, OFF	BOOT1 (PB2) function is not used.
SB142, SB152 (BOOT1,	ON, OFF	BOOT1 (PB2) is pulled up.
Only for F2 and F4 Series)	OFF,ON	BOOT1 (PB2) is pulled down.
	ON, ON	Forbidden
SB147,SB157 (A4 and A5) Or SB167, SB171 (only for	ON	ADC_IN are connected to A4 and A5 (pin 9 and 11) on ST Zio connector CN9. Thus SB138 and SB143 must be OFF.
NUCLEO-F303ZE) Or SB140,SB150 (only for NUCLEO-F412ZG and NUCLEO-F413ZH)	OFF	ADC_IN are not connected to A4 and A5 (pin 9 and 11) on ST Zio connector CN9.
	OFF	PB9 and PB8 (I ² C) are not connected to A4 and A5 (pin 9 and 11) on ST Zio connector CN9.
SB138,SB143 (I2C on A4 and A5)	ON	PB9 and PB8 (I2C) are connected to A4 and A5 (pin 9 and 11) on ST Zio connector CN9. Thus SB147 and SB157 (or SB167 and SB171 for NUCLEO-F303ZE or SB140 and SB150 for NUCLEO-F412ZG and NUCLEO-F413ZH) must be OFF.
RMII Signals SB13 (PA1), SB164 (PC1),	ON	These pins are used as RMII signals and connected to Ethernet PHY. These ports must not be used on ST morpho or ST Zio connectors.
SB160 (PA2), SB178 (PC4), SB181 (PC5), SB182 (PG13), SB183 (PG11)	OFF	These pins are used as GPIOs on ST morpho connectors and not connected to Ethernet PHY.
OD477 (Eth t DOT)	ON	NRST of STM32 is connected to Ethernet PHY (U9).
SB177 (Ethernet nRST)	OFF	NRST of STM32 is not connected to Ethernet PHY (U9).
USB signals: SB186 (NUCLEO-F303ZE) or SB187 (all other Nucleo	ON	PG6 is connected to R70 to control USB D+ pull up (NUCLEO-F303ZE). PG6 is connected to 5 V switch Enable (U12) to control V_{BUS} or CN13 (All other NUCLEO).
boards) (PG6)	OFF	This pin is used as GPIO on ST morpho connectors.
SB132 (PA12), SB133	ON	These pins are used as D+ and D- on USB connector CN13.
(PA11)	OFF	These pins are used as GPIOs on ST morpho connectors.

^{1.} Default SBx state is shown in bold.

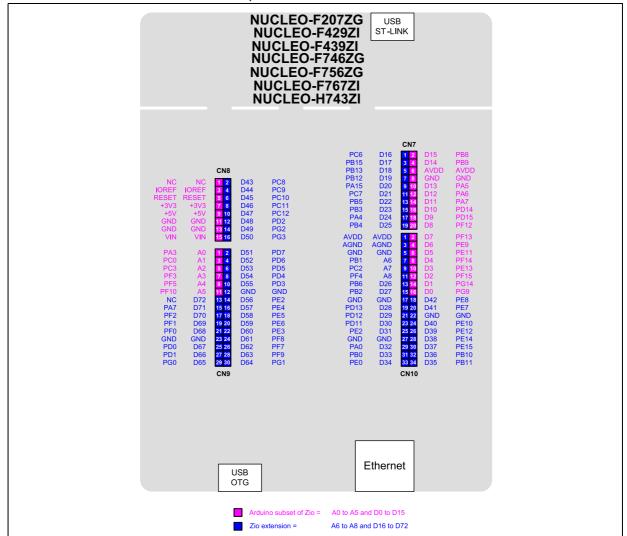

All the other solder bridges present on the STM32 Nucleo-144 board are used to configure several I/Os and power supply pins for compatibility of features and pinout with the target STM32 supported.

The STM32 Nucleo-144 board is delivered with the solder bridges configured, according to the target STM32 supported.

6.13 Extension connectors

For each STM32 Nucleo-144 board the following figures show the signals connected by default to the ST Zio connectors (CN7, CN8, CN9, CN10), including the support for ARDUINO[®] Uno V3.

Figure 11. NUCLEO-F207ZG, NUCLEO-F429ZI, NUCLEO-F439ZI, NUCLEO-F746ZG, NUCLEO-F756ZG, NUCLEO-F767ZI and NUCLEO-H743ZI

6.14 ST Zio connectors

CN7, CN8, CN9 and CN10 are female on top side and male on bottom side connectors. They include support for ARDUINO[®] Uno V3. Most shields designed for ARDUINO[®] Uno V3 can fit to the STM32 Nucleo-144 board.

To cope with ARDUINO® Uno V3, apply the following modifications:

- SB138 and SB143 must be ON
- SB140/147/150/157/167/171 must be OFF to connect I²C on A4 (pin 5) and A5 (pin 6 of CN9).
- **Caution:1** The I/Os of STM32 microcontroller are 3.3 V compatible instead of 5 V for ARDUINO® Uno
- **Caution:2** SB12 must be removed before implementing ARDUINO[®] shield with V_{REF+} power being provided on CN7 pin 6. Refer to *Table 12: Solder bridges* for details on SB12.

Table 13 to *Table 20* show the pin assignment for each STM32 microcontroller on the ST Zio connectors.

- 1. For more details refer to Table 12: Solder bridges.
- PA7 is used as D11 and connected to CN7 pin 14 by default, if JP6 is ON, it is also connected to both Ethernet PHY as RMII_DV and CN9 pin 15. In this case only one function of the Ethernet or D11 must be used.
- 3. PE2 is connected to both CN9 pin 14 (I/O) and CN10 pin 25 (I/O). Only one connector pin must be used at one time.
- PB13 is used as I2S_A_CK and connected to CN7 pin 5 by default, if JP7 is ON, it is also connected to Ethernet PHY as RMII_TXD1. In this case only one function of Ethernet or I2S_A must be used.

- 1. For more details refer to *Table 12: Solder bridges*.
- 2. PA7 is used as D11 and connected to CN7 pin 14 by default, if JP6 is ON, it is also connected to CN9 pin 15 as COMP2_INP. In this case only one function of the Comparator input or D11 must be used.
- 3. PE2 is connected to both CN9 pin 14 (I/O) and CN10 pin 25 (I/O). Only one connector pin must be used at one time.

- 1. For more details refer to Table 12: Solder bridges.
- 2. PE2 is connected to both CN9 pin14 (SAI_A_MCLK) and CN10 pin25 (QSPI_BK1_IO2). Only one connector pin can be used at one time.
- 3. Limitation: SAI_A_SD (PE4) is swapped with SAI_A_FS (PE6). These two pins on CN10 of NUCLEO-F413ZH are not compatible with other STM32 Nucleo-144 boards.

^{1.} For more details refer to Table 12: Solder bridges.

4

UM1974 Rev 10 55/84

PA7 is used as D11 and connected to CN7 pin 14 by default. If JP6 is ON, it is also connected to both Ethernet PHY as RMII_DV and CN9 pin 15. In this case only one function of the Ethernet or D11 must be used.

^{3.} PE2 is connected to both CN9 pin 14 (SAI_A_MCLK) and CN10 pin 25 (I/O). Only one function must be used at one time.

^{4.} PB13 is used as I2S A_CK and connected to CN7 pin 5 by default. If JP7 is ON, it is also connected to the Ethernet PHY as RMII_TXD1. In this case only one function of the Ethernet or I2S_A must be used.

Table 20. NUCLEO-H743ZI pin assignments (continued)

- 1. For more details refer to Table 12: Solder bridges.
- PA7 is used as D11 and connected to CN7 pin14 by default, if JP6 is ON, it is also connected to both Ethernet PHY as RMII_DV and CN9 pin15. In this case only one function of Ethernet or D11 could be used.
- 3. PE2 is connected to both CN9 pin14 (SAI_A_MCLK) and CN10 pin 25 (QSPI_BK1_IO2). Only one function can be used at one time.
- 4. PB13 is used as I2S_A_CK and connected to CN7 pin 5 by default. If JP7 is ON, it is also connected to the Ethernet PHY as RMII_TXD1. In this case only one function of the Ethernet or I2S_A must be used.

6.15 ST morpho connector

The ST morpho connector consists in male pin header footprints CN11 and CN12 (OFF by default). They are used to connect the STM32 Nucleo-144 board to an extension board or a prototype/wrapping board placed on top of the STM32 Nucleo-144 board. All signals and power pins of the STM32 are available on the ST morpho connector. This connector can also be probed by an oscilloscope, logical analyzer or voltmeter.

Table 21 and Table 22 show the pin assignments of each STM32 on the ST morpho connector.

Table 21. ST morpho connector for NUCLEO-F207ZG, NUCLEO-F412ZG, NUCLEO-F413ZH, NUCLEO-F429ZI, NUCLEO-F439ZI, NUCLEO-F446ZE, NUCLEO-F722ZE, NUCLEO-F746ZG, NUCLEO-F756ZG, NUCLEO-F767ZI and NUCLEO-H743ZI

^{2.} U5V is the 5 V power coming from the ST-LINK/V2-1 USB connector that rises before and it rises before the +5 V rising on the board.

^{3.} PA13 and PA14 are shared with the SWD signals connected to ST-LINK/V2-1. If ST-LINK part is not cut, it is not recommended to use them as I/O pins.

7 Nucleo-144 (MB1137) information

7.1 Product marking

The stickers located on the top or bottom side of all PCBs provide product information:

 First sticker: product order code and product identification, generally placed on the main board featuring the target device.
 Example:

Product order code Product identification

 Second sticker: board reference with revision and serial number, available on each PCB.

Example:

On the first sticker, the first line provides the product order code, and the second line the product identification.

On the second sticker, the first line has the following format: "MBxxxx-Variant-yzz", where "MBxxxx" is the board reference, "Variant" (optional) identifies the mounting variant when several exist, "y" is the PCB revision and "zz" is the assembly revision, for example B01. The second line shows the board serial number used for traceability.

Parts marked as "ES" or "E" are not yet qualified and therefore not approved for use in production. ST is not responsible for any consequences resulting from such use. In no event will ST be liable for the customer using any of these engineering samples in production. ST's Quality department must be contacted prior to any decision to use these engineering samples to run a qualification activity.

"E" or "ES" marking examples of location:

- On the targeted STM32 that is soldered on the board (for an illustration of STM32 marking, refer to the STM32 datasheet *Package information* paragraph at the www.st.com website).
- Next to the evaluation tool ordering part number that is stuck or silk-screen printed on the board.

Some boards feature a specific STM32 device version, which allows the operation of any bundled commercial stack/library available. This STM32 device shows a "U" marking option at the end of the standard part number and is not available for sales.

To use the same commercial stack in their applications, the developers might need to purchase a part number specific to this stack/library. The price of those part numbers includes the stack/library royalties.

Federal Communications Commission (FCC) 8 and ISED Canada Compliance Statements

8.1 **FCC Compliance Statement**

8.1.1 Part 15.19

This device complies with Part 15 of the FCC Rules. Operation is subject to the following two conditions: (1) this device may not cause harmful interference, and (2) this device must accept any interference received, including interference that may cause undesired operation.

8.1.2 Part 15.21

Any changes or modifications to this equipment not expressly approved by STMicroelectronics may cause harmful interference and void the user's authority to operate this equipment.

8.1.3 Part 15.105

This equipment has been tested and found to comply with the limits for a Class B digital device, pursuant to part 15 of the FCC Rules. These limits are designed to provide reasonable protection against harmful interference in a residential installation. This equipment generates uses and can radiate radio frequency energy and, if not installed and used in accordance with the instructions, may cause harmful interference to radio communications. However, there is no guarantee that interference will not occur in a particular installation. If this equipment does cause harmful interference to radio or television reception, which can be determined by turning the equipment off and on, the user is encouraged to try to correct the interference by one or more of the following measures:

- Reorient or relocate the receiving antenna.
- Increase the separation between the equipment and the receiver.
- Connect the equipment into an outlet on a circuit different from that to which the receiver is connected.
- Consult the dealer or an experienced radio/TV technician for help.

Note: Use only shielded cables.

21-Dec-2015	1	Initial version.
20-May-2016	2	Updated Introduction, Section 6.13: Extension connectors, Section 6.14: ST Zio connectors to add NUCLEO-F767ZI.
08-Jul-2016	3	Updated Introduction, Section 3: Ordering information, Section 6.11: Ethernet, Section 6.12: Solder bridges, Section 6.13: Extension connectors, Section 6.14: ST Zio connectors, Section 6.15: ST morpho connector to add NUCLEO-F412ZG.
28-Nov-2016	4	Updated Introduction, Section 3: Ordering information, Section 6.11: Ethernet, Section 6.12: Solder bridges, Section 6.13: Extension connectors, Section 6.14: ST Zio connectors, Section 6.15: ST morpho connector to add NUCLEO-F413ZH.
19-Jan-2017	5	Updated Introduction, Section 3: Ordering information, Section 6.11: Ethernet, Section 6.12: Solder bridges, Section 6.13: Extension connectors, Section 6.14: ST Zio connectors, Section 6.15: ST morpho connector to add NUCLEO-F722ZE.
14-Apr-2017	6	Updated Introduction, Section 3: Ordering information and Table 12: Solder bridges to add NUCLEO-H743ZI.
15-Dec-2017	7	Expanded document scope to the NUCLEO-F439ZI and NUCLEO-F756ZG products: - Updated Introduction, Features, Product marking and Ordering information - Updated Figure 11, Table 13, Table 17 and Table 21
28-Aug-2020	8	Removed Electrical schematics. Added Appendix B: CE conformity and updated Appendix A: Federal Communications Commission (FCC) and ISED Canada Compliance Statements. Updated Figure 3. Reorganized Section 6.13: Extension connectors. Revised the beginning of the document: - Updated the document title - Updated Section 1: Features, Section 2: Ordering information, Section 3.2: Development toolchains and Section 3.3: Demonstration software - Added Section 2.1: Product marking and Section 2.2: Codification

UM1974 Revision history

Table 25. Document revision history (continued)

Date	Revision	Changes
11-Jan-2023	9	Updated the USART3 default configuration in <i>Table</i> 9. Added <i>Chapter 7: Nucleo-144 (MB1137) information</i> . Updated <i>Chapter 1: Features</i> , <i>Chapter 2: Ordering information</i> , and <i>Chapter 3: Development environment</i> . Updated <i>Section 8.2: ISED Compliance Statement</i> . Updated <i>Figure 4</i> , <i>Figure 5</i> , <i>Figure 9</i> , and <i>Figure 10</i> . Removed the references to Arm [®] Mbed™.
4-Aug-2023	10	Updated the USART3 description in Section 6.9: USART communication and in Table 9. Removed Chapter 9: CE conformity.
